

# ANTIMICROBIAL COVERS

Reduces Germ Transfer on High-Touch Surfaces

Star Micronics, a leading manufacturer of mobile, point of sale (POS), and customer engagement technologies, is excited to announce it's offering a line of antimicrobial covers designed to reduce germs on high-touch surfaces. The antimicrobial covers are safe to use, easy to apply, and reduce microbes on common touch points. From door handles, to checkout counters, the antimicrobial covers are designed to create safer surfaces for both employees and customers.

Featuring a proprietary antimicrobial coating that protects the surface by actively killing microbes (reducing microbe populations) on contact, the antimicrobial covers are designed to complement regular cleaning in retail stores, restaurants, and more. These products have been tested and are EPA-registered and latex-free.

Star will be offering several antimicrobial cover products, including wraps made specifically for door handles, door push-bars, elevator buttons, door push plates, and more. Star will also offer custom rolls that retailers or restaurants can cut and apply to countertops, restroom surfaces, and more.

The antimicrobial covers are expected to last up to 6 months depending on the amount of traffic, and will remain active even if scratched or nicked. Antimicrobial covers that are opaque perform best when stored and used in a -40°F - 180°F temperature range, while clear covers perform best when stored and used in a 30°F - 120°F temperature range. Antimicrobial covers have a shelf life of 12 months when stored properly.

## Features:

- Antimicrobial surface
- Reduces the transfer of germs on high-touch surfaces
- Designed for use on door handles and push-bars, restroom surfaces, checkout counters, elevator buttons, and more
- Thoroughly tested, EPA-registered, FDA-compliant, GRAS, RoHS, and latex-free
- Custom application rolls available

**The number of places to apply the antimicrobial covers is endless!**

**99.9% effective**
